

ECONOMIC HISTORY A - O

SECS-P/12 - 9 CFU - 1° Semester

Teaching Staff

MARIO PERUGINI

LEARNING OBJECTIVES

Knowledge and understanding: The module intends to provide the student with useful knowledge and elements for comprehending and interpreting the economic processes which have characterised world economy evolution in the last centuries.

Applying knowledge and understanding: Through the analysis of the evolutionary processes in the socioeconomic layout of various international contexts, the student is expected to acquire the capability to interpret the socio-economic events in their cause-effect relations. He/She will also acquire the panoramic vision of development issues in their complex interdependencies. Therefore, He/she will be able to assess, with awareness, current events and correlate them with political and economic choices in various contexts.

Making judgements: The comprehension of past economic events on an international scale will lead the student to acquire the suitable level of maturity for expressing personal opinions, with fully autonomous judgement, on current economic events and on future consequences of national and international political choices in the economic context.

Communication skills: The study of the module topics will provide the student with the necessary preparation for bearing a debate on economic themes. To facilitate the pursuit of this objective, the exchange of opinions and the debate will be welcome and encouraged during both lectures and reception time.

Learning skills: The module intends to supply the student with notions of economic terminology and with economic and statistic models and tools. The student will then learn to assess economic events, in light of contextual factors of various kinds. This will result in the enhancement of the student's capabilities to learn new concepts and create links with the topics of other disciplines to which Economic History resorts, for interpreting and comprehending economic events.

COURSE STRUCTURE

Frontal lessons

DETAILED COURSE CONTENT
